

## **Exiting.....**

**If the power goes out, can you, your employees, and customers see well enough to get out of the building safely?**

It may be necessary to install emergency lighting that will work automatically when the power goes out. You should have a flashlight handy.

**Are the doors used for exiting unlocked whenever you are open for business?**

All doors used for exiting purposes must be open-able without the use of a key or special knowledge anytime the building is occupied. This includes employees as well as the public.

**Is there a clear aisle or passageway to all exit doors?**

Building occupants must be able to get to the exit doors without having to go around displays that are in the way. They must also be able to get out without tripping anything.

**Can you see these exit doors or signs indicating their location from everywhere within your occupancy?**

If it looks like an exit door, it must act like one! Identify the exit doors with signs having letters 6 inches high on contrasting backgrounds.

**Are the lighted exit signs in your business working?**

If you have lighted signs in your business, the bulbs must be replaced whenever they burn out.

## **Miscellaneous.....**

**Can you remove any stored flammable or combustible liquids from your business? Not all businesses are allowed to use and store them.**

The fewer flammable or combustible liquids you keep or use in your business, the better. If you don't need them, properly discard them or give them to someone who can use them. Questions please call us.

**Is storage orderly and at least two feet below the ceiling in your storage area?**

While it is sometimes difficult, storage in storerooms should be kept away from light fixtures, air supply, and exhaust fans.

**If you have a compressed gas cylinder within your business, is it secured so it can't fall or be knocked over?**

Many businesses have compressed gas tanks that will sail away like a rocket if they fall over and the control valve breaks off.

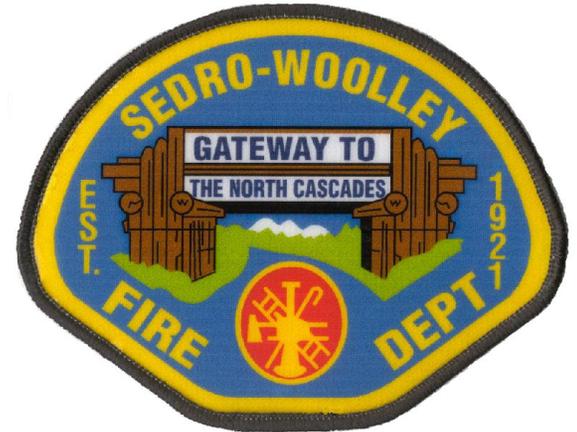

**Do you know how to turn the natural gas supply off to your business?**

If the furnace malfunctions or there is a gas leak, you should know how to turn off the fuel supply in a hurry.

**Have you had your furnace serviced in the last 12 months?**

Not only will the furnace work more efficiently, the cost of operation may be less. Remember to change the filters regularly.

# **Sedro-Woolley Fire Department**

## **Fire and Life Safety**

### **Self-Inspection Guidelines**

**Use this guideline throughout the year to maintain a fire safe workplace.**

**Sedro-Woolley Fire Department  
325 Metcalf Street  
Sedro-Woolley, WA 98284  
360-855-2252**

## **Exterior.....**

**Are address numbers for the building or your business space clearly visible from the street or driveway?**

All emergency vehicles (fire, police, ambulance) must be able to find your business. Numbers should be at least five inches high.

**Can emergency vehicles gain access to your business without being obstructed by parked vehicles?**

Remember, fire department emergency vehicles are very large and difficult to maneuver in tight places. Help us get to your business by keeping the roads clear.

**Is the area around your business free of trash or combustible debris?**

If a fire occurs outside the building, combustible material will just add fuel to the fire allowing it to spread to the building.

**Is the trash dumpster for your business more than five feet from the buildings exterior wall, roof overhang, or any opening like a door or window?**

If the dumpster is too close and were to catch fire, it would likely spread to the building.

## **Electrical.....**

**Are the electrical appliances and the cords supplying them in good condition?**

Frayed power cords and worn or poorly maintained electrical equipment can start a fire.

**Do all your electrical extension cords have a circuit breaker?**

Lightweight electrical extension cords are not allowed for use in commercial businesses. If you need an extension cord, use the type equipped with an internal circuit breaker. Don't use these extension cords for supplying power to large appliances such as refrigerators, copy machines, or microwave ovens.

**Is there a clear area in front of the circuit breaker panel?**

In an emergency, when access is necessary to get to the circuit breaker panel, you don't want anything in your way. Also, if there is a fire in the panel, items stored in front of it may allow the fire to spread.

**Is there a cover on all electrical switches, outlets and junction boxes?**

Missing covers are a common safety hazard and very inexpensive to correct.

**Are all circuit breakers within the panel identified?**

If you need to turn the power off to a certain part of your business or piece of equipment, it is necessary to have the circuit breaker identified.

## **Heating.....**

**Is the area around the furnace clear of combustible material?**

This is important when the furnace is located in the open area of your business and it is necessary to work around it. It generates heat that may start surrounding objects on fire.

**If you use a portable electric heater, consider this:**

**Is it the style that will automatically shut off when tipped over?**

If you have to use a portable heater, it must be electric. If it won't shut off automatically when tipped over, replace it with one that will. Kerosene heaters are not allowed for use in commercial businesses.

**When you use your portable electric heater, do you keep it away from combustible materials?**

Electric heaters will ignite combustibles in a very short amount of time. It usually happens when nobody is in the room.

**Is your portable heater plugged directly into a wall outlet?**

Don't use any kind of extension wiring for a portable heater (not even a power strip equipped with a circuit breaker). Portable electric heaters consume a large amount of electricity and will trip the power strip circuit breaker or melt an ordinary extension cord.

## **Fire Extinguishers.....**

**Is there at least one portable fire extinguisher mounted in your business?**

**Have all fire extinguishers been inspected by properly trained service technicians annually?**

**If you have range guards, are they cleaned frequently and inspected semi-annually?**

**Is it readily accessible and visible?**

**Do you and your employees know how to use your fire extinguisher?**
