John Wright, Monday September 7

While we really have no objection to another building going in behind the existing one we do have a problem with the lighting. It's our belief that the original project failed grossly in following their lighting requirements. We live on polte road and the night lights and spotlights coming from that building light up our deck and our bedroom if we don't close the curtains. It's our understanding that all lighting was supposed to be shielded so as not to light up the surrounding areas with light pollution. I believe this needs to be addressed prior to beginning any new construction. We were away for ten years when this happened and have since moved back and we are extremely disappointed in how we've been affected by this project. We can only hope that the city will take action to have this corrected. Best regards
