REVISION TO FISH & WILDLIFE HABITAT CONSERVATION AREA
ASSESSMENT PREPARED FOR NIEL PRATHER PROPERTY, JULY 25,
2019. THIS IS P36405. THE REVISIONS INCLUDE:

1. (a). The main stream that flows through the property (Stream A) is known to be a Type 3 water per SWMC 17.65.530(b) and therefore has a 110' buffer as measured from the ordinary high water mark of the stream;
- 2(a). The assessment document is revised to show the change from the Type F stream to a Type 3;
- (b). The application map shows the Type 3 stream runs through Lots 2 and part of Lot 1. The revision is to show the 200' buffer is replaced by the 110' buffer which is applied to both sides of the stream.
- 3(a). The F&WHCA discusses the unnamed Type 5 stream as a tributary stream. The word "tributary" will be removed.
- (b). The buffer line on the west side of Stream B will be extended to the entry road.

The revisions are to comply with the letter from Katherine Wier dated November 12, 2020.

Prepared and submitted by,
Bob Whitefield, MsF
